

**ALWAYS-ON, LIGHTNING-FAST,
PROPERTY-WIDE CONNECTIVITY
THAT FOLLOWS THEM EVERYWHERE**

From move in to move out, your residents are always connected to the tech they use every day. They expect connectivity upon arriving onto your property, into their unit, and everywhere in between. Whether you run an apartment community, student housing complex, or senior living community, don't leave your Wi-Fi service and resident satisfaction in the hands of an outside Internet Service Provider (ISP).

A high-speed Wi-Fi network is required to deliver new internet-based experiences. Once thought of as a complex and costly burden is now a platform for new opportunities!

Owning your own Wi-Fi network not only allows you to optimize your internet but also empowers you to design new user experiences.

Single Digits Network Benefits

- New Revenue per unit
- Increase Property Value
- Lower Expenses from IoT Tech
- Seamless Connectivity
- Increase Resident Satisfaction
- Promote Full Occupancy
- Reduce Management Burden
- Lower Liability
- Increase Security
- Future Network Expansion
- Network Visibility & Efficiency

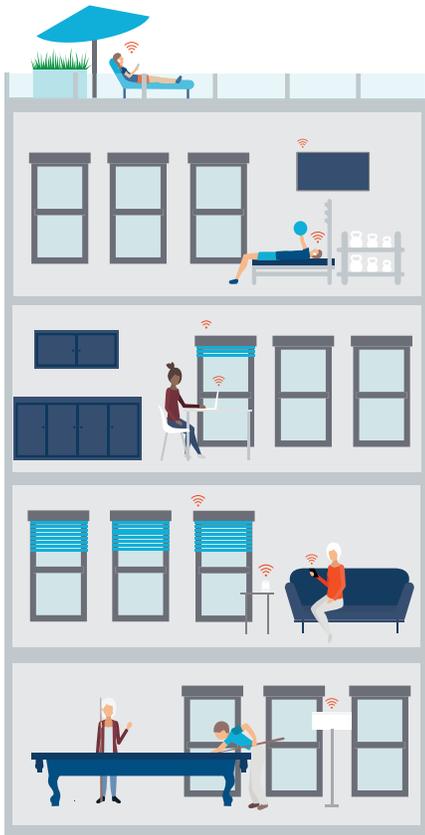

ATTRACT & RETAIN RESIDENTS

By offering additional amenities, higher levels of service, and extended Wi-Fi coverage, you'll appeal to more residents who crave **The Connected Life Experience™**.

- + Deliver residents' individual private Wi-Fi networks wherever they are on the property
- + Residents will get their own personal network access for their devices and to share with guests.

59% of residents say that **high-speed internet and Wi-Fi** is more important than an in-unit laundry.

More importantly, residents want to feel safe. In order to lower your liability and increase security by leveraging connected video, access cards, and system authorization, your property needs a robust and trusted network with redundancies to accommodate those systems.

SAY GOODBYE TO NETWORK WORRIES

You didn't get into this business because you love providing technical support. Hand that thankless, yet essential task off to the experts.

When you partner with Single Digits, you get the benefits of owning your Wi-Fi network without the hassles of managing it. This saves you time, money, and headaches while improving tenant experience and satisfaction.

Single Digits will design, install, manage and monitor your network performance to:

- + maximize performance and security
- + deploy updates with the latest technology advancements
- + identify areas for expansion
- + spot problems before they develop

SAY HELLO TO NEW REVENUES

Your residents are paying \$50/month or more for internet. Why not capitalize on that need while creating additional opportunities to provide tenant value? Investing in your own network gains an asset that increases your Net Operating Income (NOI) and adds lasting value to your property.

The income from internet is just the beginning of the potential revenue growth you can realize from owning your network.

Contact Single Digits for a **FREE** assessment of your property Wi-Fi needs.
